

Algorithm for Treatment of BDI - Currently Hypomanic/Manic

*Use targeted adjunctive treatment as necessary before moving to next stage:

Agitation/Aggression - clonidine, sedatives

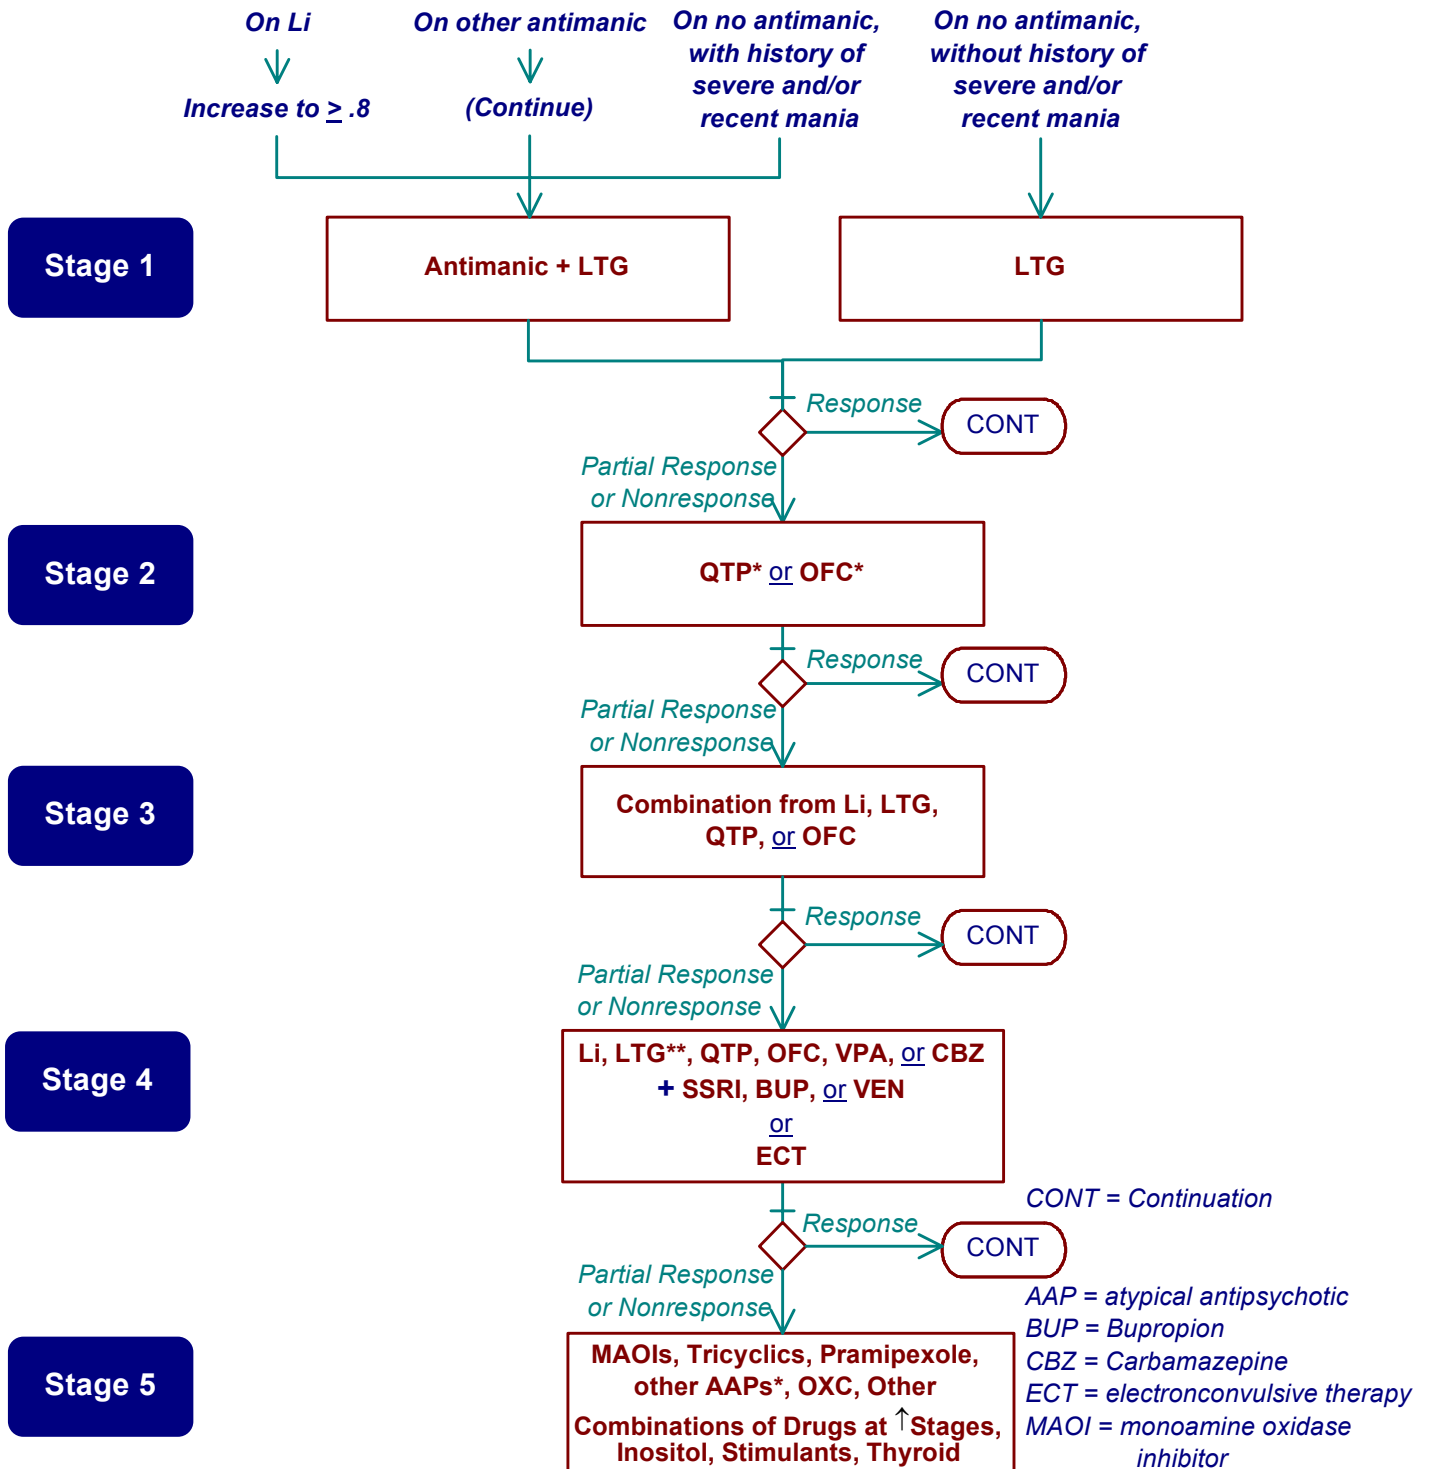

Insomnia - hypnotics

Anxiety - benzodiazepines, gabapentin

** Safety and other concerns led to placement of OLZ and CBZ as alternate 1st stage choices.

It is appropriate to try >1 combination at a given level. New trials from each stage can be labeled Stage 2 (1), Stage 2 (2), etc.

Algorithm for the Treatment of BDI - Currently Depressed

* Note safety issue described in text.

**LTG has limited antimanic efficacy and in combination with an antidepressant may require the addition of an antimanic.
